	Pages	
	Russian/English	
Regularization of quasilinear stationary problems related to the problem of large deformations of the membrane. E.G. D'yakovon	5	1
Projection-gradient method for quasidifferentiable functionals with Hölder-continuous gradient. A.V. Razgilin	12	10
Numerical investigation of the time-dependent three-dimensional viscous incompressible flow in a channel of square cross section on the basis of the Navier–Stokes model. S.B. Berezin and V.M. Paskonov	16	14
Nonlinear regularization of inversion of exponential Radon transform. O.V. Shestakov	23	23
Asymptotic normality of self-normalized Pearson statistics. D.I. Zhdanov	28	29
Construction of finite-dimensional H_∞ state estimate for a distributed parameter system. V.E. Kogutovskii	32	34
Computing the attainable set support function for a linear controllable system with guaranteed error estimation. N.B. Brusnikina	42	45
Biometric human identity identification based on face recognition. P.V. Bazanov	49	53
