JOURNAL OF SUPERHARD MATERIALS

PAGES
RUSSIAN/ENGLISH

Production, Structure, Properties

- Analysis of the basic theories of sintering materials. 2. Chemical reactions and nucleation processes. Basic principles of the modeling of sintering superhard composite diamond-containing materials (a review).
N. A. Bondarenko, A. N. Zhukovsky, and V. A. Mechnik. 3 1
- Electrical conductivity of cubic boron nitride-on-carbide substrate composites and the possibility for their spark cutting. S. V. Tkach,
A. A. Shulzhenko, N. P. Bezhenar, V. N. Tkach, S. A. Bozhko,
P. I. Kravchuk, and O. P. Pruss. 16 12
- Structural and phase transformations in ceramics of the SiC—Al₂O₃—ZrO₂ system when acted upon by concentrated solar radiation.
O. N. Grigoriev, I. A. Podchernyaeva, A. D. Panasyuk, I. P. Neshpor,
V. V. Pasichny, A. P. Umansky, and O. V. Subbotina. 25 21
- Effect of the degree of the carbide phase adjacency on the formation of the stressed-strained state in hard alloys when cooled after sintering.
M. G. Loshak, S. B. Polotnyak, and L. I. Aleksandrova. 30 26
- The sintering of the AlN—SiC composite material. T. B. Serbenyuk,
V. V. Ivzhenko, V. B. Sverdun, I. P. Fesenko,
V. I. Chasnyk, R. S. Shmegera, and T. O. Prikhna. 38 33
- Analysis of the method of comparative material testing on Bridgman anvils (Wakatsuki's method). S. A. Vinogradov. 47 43

Investigation of Machining Processes

- The study of conditions to ensure defect-free machining of magnetically hard alloys with superabrasive wheels. V. I. Lavrinenko and
A. M. Brovchenko. 57 52
- The study of friction processes and force levels in finish cutting of thermoplastic polymer scintillator components using tools with diamond, sapphire or zirconia ceramic inserts. D. V. Tkachuk,
V. V. Rogov, and A. G. Vetrov. 65 58

Tools, Powders, Pastes

- The comparative analysis of adequacy of the techniques for quantitative assessment of homogeneity of superabrasive powders. G. A. Petasyuk. 74 66
- Assessment of diamond grit orientation in the abrasive layer. T. G. Afrikyan. 84 75
